The drying experts of Hönle Group – Hönle, Eltosch Grafix, PrintConcept und Aladin – look back on a successful drupa. Following the general trend, the companies noticed a reduced attendance, but the in-fact visitor contacts were extraordinarily good. In addition to concrete requests our staff had many interesting discussions which will lead to joint research projects and in the end to new drying and curing systems – the show highlights of the coming years.

This time the general interest was focused on UV-LED technology. The spotlight was especially on **LED Powerline Focus**, a powerful UV-LED system with modular design which allows the switch-off of single segments and a particular focusing optic. It was especially developed for sheet-fed offset printing. Another highlight was **LED Powerline Flexo**, compact and with integrated control, which is applied for flexo printing applications. Also in the visitors' focus was **jetCURE LED**, a highly intensive curing unit, which combines the merits of a technically mature curing concept with the known advantages of LED technology.

Very special highlights indeed were the two Hönle Group drupa parties, which were extremely well attended. With music, Bavarian beer, exotic cocktails and culinary delicacies, business partners, associates and staff were having a ball celebrating the 40th anniversary of Dr. Hönle AG as well as a successful drupa.
